

# 4000 Climate Change Books Provided To 296 Schools through the Support of Ektara

A total of 1,28,990 students benefitted

Our activities are warming the Earth  
and slowly destroying it causing climate change

**We must restore the ecological balance of the Earth !!**

**What can we do to restore the ecological balance of the earth ?**

To avoid the worst effects of climate change  
and restore the ecological balance of the earth  
we need to reduce the greenhouse gases.

**To do this we must behave responsibly  
and change the way we do things.**

**Climate change leads to disasters!**

#### **Heat Waves**

Already there are unpredictable waves of extreme heat across the world. Some places may become so hot that people and some animals may not be able to live there. People could fall ill due to the heat, lands that were farms might turn into deserts and crops may fail.

#### **Heavy Rainfall**

Due to climate change, the rainfall patterns have become unpredictable and the supply of fresh water is also affected. Without safe water, we are at increased risk of diseases, our hygiene is impacted.

#### **Drought**

The water cycle has changed because of the Earth's heating and rise in temperature that we read about earlier. The rate of water evaporation from the soil and plants has increased, thus causing drought. The lack of water can lead to famine, failure of crops, food shortages and affect our health.

#### **Wildfires**

Climate change increases the risk of a hot and dry weather which can cause wildfires. These wildfires destroy habitats and homes and can be deadly.

#### **Threat to habitats and animals**

Climate change has caused lots of problem for animals. The migration patterns of birds and mammals are affected due to the change. The areas they live also keeps shrinking. The existence of many animals is threatened.

#### **Ocean acidification**

The ocean plays a very important role in regulating the amount of carbon dioxide in the atmosphere. Due to climate change, the ocean absorbs more carbon dioxide than it should, which leads to acidification. This is happening almost 100 times faster than it ever has before! All marine life in the ocean is seriously affected because of acidification.

#### **Sea-level rise**

Due to the warming of the planet, the ice caps are melting. This has caused sea levels to rise at almost three times over the last century! All our islands and coastal regions in the world are in danger of flooding.

#### **Cyclones and Typhoons**

Warmer seas and oceans lead to more severe coastal storms, causing great damage.

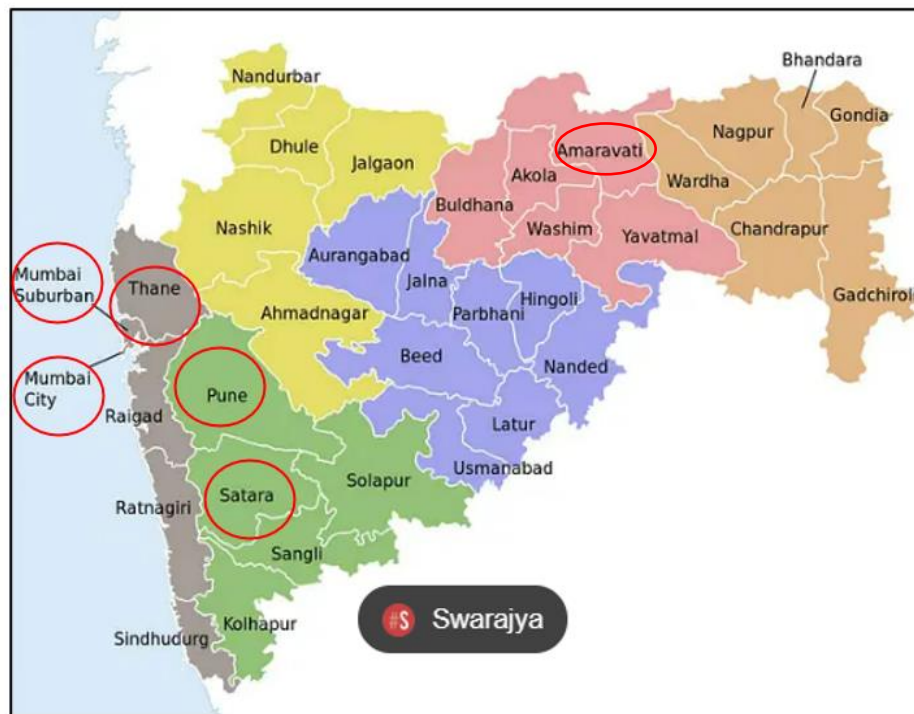

These schools are located in Mumbai, Pune, Satara, Lonavala, Palghar, Shirur and Uttar Pradesh.
